

GreenCity 700

MĀTĀBĪ

Your sprayer for:

- Small-sized areas or indoor plants.
- Watering and humidifying.
- Fertilising your plants and protecting them from pests and disease.

Why GreenCity 700?

Ergonomic design.

It has a curved shape to keep the sprayer parallel to your forearm as you work. This way you won't damage the plants when you move the sprayer close to them.

The tank is translucent and has a level indicator to see the volume of liquid.

Removable lance.

The 13 cm lance can be used to comfortably reach stalks and leaves in inaccessible places, even for plants hanging over balconies or in high places.

You can turn the nozzles upwards to treat hidden pests on the back of the leaves without splashing the rest of the plant.

If you don't need it you can remove it and use the fine spray nozzle instead.

Fine spray nozzle

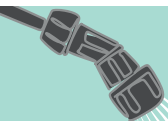

Adjustable nozzle

Exchangeable nozzles.

GreenCity sprayers have two nozzles to cater to different needs.

- The **fine spray nozzle** creates a mist of droplets that will stay on the surface of your plants for longer, providing moisture.
- The **adjustable nozzle** has a cone with which you can change the type of spray and create a jet. This means you can fertilise your plants, combat pests and even clean their leaves.
